

Install the following R packages in your R script.

```
install.packages("tidyverse") # data manipulation, makes codes more readable
```

```
install.packages("learnr") # makes it easy to turn any R Markdown document into an interactive tutorial
```

```
install.packages("readxl") # supports importing data in R (excel files)
```

```
install.packages("readr") # support data exporting functions
```

```
install.packages("dplyr") # supports in data manipulation and operations
```

```
install.packages("ggplot2")# supports graphics in R
```

```
install.packages("epiDisplay")# shows graphics data in ascending order
```

load the libraries in R

```
library(tidyverse)
```

```
library(learnr)
```

```
library(readxl)
```

```
library(readr)
```

```
library(dplyr)
```

```
library(ggplot2)
```

```
library(epiDisplay)
```
